

Slide 1: Market Gap & Problem

Users often purchase the same set of products repeatedly and rarely explore new categories available on the platform.

- Users appreciate quick delivery and convenience
- Users are willing to pay for premium services and products
- Users rarely explore new categories available on the platform

Current Platform Metrics

- **1 million** - Monthly Active Customers
- **\$50** - Average Order Value
- **20%** - Customer Retention Rate

Competitor Analysis

Platform	What they offer	What's missing
Blinkit	Quick delivery and convenience	Limited product offerings and categories
Zepto	Quick delivery and convenience	Limited product offerings and categories
Swiggy Instamart	Quick delivery and convenience	Limited product offerings and categories
BigBasket	Wide product offerings and categories	Slow delivery and limited convenience
Amazon Fresh	Wide product offerings and categories	Slow delivery and limited convenience

Why Solve This First

- **Reason 1:** Users are willing to pay for premium services and products
- **Reason 2:** Users appreciate quick delivery and convenience
- **Reason 3:** Users rarely explore new categories available on the platform

Slide 2: User Research & Sentiment

Users appreciate quick delivery and convenience, but struggle to discover new products and categories. Total feedback analyzed/labeled: **150 / 150**.

Discovery Pain Rate

- **40%** - Variety
- **30%** - Less Repetition
- **20%** - Real navigation
- **10%** - Better suggestions

Sentiment Analysis

- **60** Negative
- **30** Neutral
- **60** Positive

Cited User Verbatims

"A very good alternative when you are unable to reach local marketplace or you have to purchase something urgently and you have less time." (play_store)

"good, This service useful in emergency situations." (play_store)

Slide 3: Segment Personas & User Journey

Understanding the needs and pain points of our users.

User Personas

1. Busy Professional

- **"Archetype":** Age 25-45, City: Urban, Frequency: Daily
- **Trust pattern:** High
- **Unmet need:** Convenience and premium services
- **Behavioral trap:** Limited product offerings and categories
- **Quote:** *"I need to be able to order quickly and easily, without having to spend too much time searching for products."*

2. Stay-at-Home Parent

- **"Archetype":** Age 25-45, City: Suburban, Frequency: Weekly
- **Trust pattern:** Medium
- **Unmet need:** Convenience and premium services
- **Behavioral trap:** Limited product offerings and categories
- **Quote:** *"I need to be able to order quickly and easily, without having to spend too much time searching for products."*

User Journey Habit Loop

1. **Open:** Browse products and categories.
Friction: Limited product offerings and categories.
2. **Served:** Order products and categories.
Friction: Limited product offerings and categories.
3. **Browse:** Explore new products and categories.
Friction: Limited product offerings and categories.
4. **Checkout:** Complete order.
Friction: Limited product offerings and categories.
5. **Exit:** Leave the platform.
Friction: Limited product offerings and categories.

Slide 4: Problem Framing Canvas

Understanding the root cause of the problem.

- **1. What is the True Problem?**
Limited product offerings and categories.

- **2. Who faces this problem?**
Busy Professionals and Stay-at-Home Parents.
- **3. How do we know it's a problem?**
Users rarely explore new categories available on the platform. Users are willing to pay for premium services and products.
- **4. Value Generated by Solving This:**
For Users: Convenience and premium services.
For Platform: Increased customer retention and revenue.
- **5. Why Should We Solve This Now?**
Saturation: High. AI Unlock: High. First-mover window: High.

Slide 5: Hypotheses & RICE Framework

Evaluating the potential impact of different solutions.

- **H1: Personalized Recommendations and Offers (CHOSEN)**
Users are more likely to explore new categories if the app provides personalized recommendations and offers.
- **H2: Improved Customer Experience**
Users are more likely to report issues with damaged products and poor customer service if they are not satisfied with the app's overall experience.

RICE Framework Scoring

ID	Reach	Impact	Confidence	Effort	Score
H1	9/10	9/10	80/100	4/10	162
H2	5/10	6/10	60/100	5/10	36

Winning Rationale: The personalized recommendations and offers hypothesis has the highest RICE score, indicating that it has the highest potential impact and should be prioritized.

Slide 6: Solution Comparison

Key Insight: Multiple Solutions Can Address the Problem.

- **S1: Full Homepage Redesign (REJECTED)**
Redesign the homepage to showcase a wide range of products and categories.
Concern: "Users may not engage with the new design."
- **S2: Push Notification Campaign (REJECTED)**
Send push notifications to users with personalized product recommendations.
Concern: "Users may not respond to push notifications."
- **S3: Category Badges without Authenticity Seals (REJECTED)**
Display category badges on product pages without authenticity seals.
Concern: "Users may not trust the badges."
- **S4: Contextual In-Cart Cross-Sell Hub with Brand Badging (CHOSEN)**
Display a cross-sell hub in the cart with brand badges and contextual recommendations.
Rationale: "Users may engage with the hub and increase sales."

Why the Selected Solution Wins Against Each Alternative

- **vs S1:** Full homepage redesign may not address the root cause of limited product offerings and categories.
- **vs S2:** Push notification campaign may not be effective in increasing engagement and sales.
- **vs S3:** Category badges without authenticity seals may not be trusted by users.

Slide 7: MVP Prototype Specifications

Key Insight: MVP Should Focus on Core Features and User Experience.

Core Features

- **Feature 1:** Contextual In-Cart Cross-Sell Hub
- **Feature 2:** Brand Badging and Authenticity Seals
- **Feature 3:** Personalized Product Recommendations

Dynamic Trust Cues Configured

- Clear and concise product descriptions
- High-quality product images
- Secure payment processing

MVP Screen Mapping Spec

1. **Login Screen:** User enters username and password to log in.
2. **Product Page:** User views product details and recommendations.
3. **Cart Screen:** User views cart contents and makes a purchase.

Slide 8: System Data Flow & Edge Cases

Key Insight: Data Flow Should Be Efficient and Secure.

Data Flow Pipeline

- **1. Review Insights Pipeline:** Reviews and ratings from users
- **2. Contextual Cross-Sell Engine:** Product information and metadata

Behavioral Nudges Built In

- **Nudge 1:** Display recommended products on product pages
- **Nudge 2:** Send personalized product recommendations via email
- **Nudge 3:** Display contextual recommendations in the cart

Edge Cases & Mitigations Handled

- **E1: User Input Error** → Validate user input and display error messages.
- **E2: Product Engine Failure** → Implement failover mechanisms and display alternative recommendations.
- **E3: Recommendation Engine Failure** → Implement failover mechanisms and display alternative recommendations.
- **E4: User Output Error** → Validate user output and display error messages.

Slide 9: Success Metrics & Leading

Indicators

Key Insight: Metrics Should Be Relevant and Actionable.

★ **NORTH STAR METRIC:** Average Order Value (AOV) - Average value of orders placed by users (Target Shift: X% to Y%)

Leading Indicators & Action Plans

Metric	Target	Impact	Below Target Action
Conversion Rate (CR)	>18%	Increase in sales and revenue	Optimize product pages and recommendations
Customer Satisfaction (CSAT)	>8%	Increase in customer loyalty and retention	Improve product quality and customer service
Average Order Value (AOV)	>15%	Increase in revenue and profitability	Optimize product offerings and pricing
Return Rate	+30%	Increase in customer satisfaction and loyalty	Improve product quality and customer service

Slide 10: Failure Modes & Mitigations

Key Insight: Failure Mitigations Should Be Proactive and Effective.

"By implementing these failure mitigations, we can ensure a successful launch and achieve our business objectives."

- Failure 1: Technical Issues
- Failure 2: User Adoption

- Failure 3: Revenue Shortfall

Failure Mitigation Matrix

What could go wrong	Mitigation	Severity
Technical Issues	Implement failover mechanisms and display alternative recommendations.	CRIT
User Adoption	Monitor user behavior and adjust product offerings and recommendations.	HIGH
Revenue Shortfall	Monitor revenue and adjust product offerings and pricing.	MED

Guardrails to Enforce

- **Average Order Value (AOV) < 4%:** Monitor revenue and adjust product offerings and pricing.
- **Conversion Rate (CR) < 200ms:** Monitor user behavior and adjust product offerings and recommendations.
- **Customer Satisfaction (CSAT) < 1%:** Monitor customer satisfaction and loyalty.
